

Your Lifting Partner

Reliable, Durable, and Energy Efficient

About Us

With a rich history dating back to 1988, we've been dedicated to providing innovative industrial products. In 2012, we embarked on a new chapter by manufacturing state-of-the-art EOT cranes under the TK Crane brand. Our experienced team, combined with cutting-edge technology, ensures that every TK Crane is built to the highest standards of safety, efficient , and durability as a leader in the industry, manufacturing, engineering, construction] sector. With a commitment to excellence, innovation, and sustainability , we deliver high-quality products and solutions tailored to the needs of our diverse clientele.

Our Misson

To be the premier provider of innovative, sustainable industrial solutions, delivering exceptional value to our clients through cutting-edge technology, industry expertise, and unwavering commitment to quality, safety, and environmental responsibility. We are dedicated to fostering long-term partnerships and empowering our clients to achieve operational excellence and sustainable growth.

Our Vision

Empowering industries globally with innovative, energy efficient , and reliable crane technology, we strive to redefine the future of lifting solutions through superior engineering, unparalleled service, and a steadfast commitment to safety and excellence.

Gaurav Mehta
Business Head

From the Desk of Business Head:-

"As a Business Head collaborating with Demag Cranes and Components, our focus is on delivering cutting-edge lifting solutions that redefine efficiency and safety in the industry."

Our Strengths

Times Krane epitomizes strength, precision, and innovation, setting the industry standard for crane excellence.

Our foundation of engineering expertise and unyielding reliability ensures the delivery of robust, high-performance solutions that conquer the most formidable industrial challenges.

Times Krane empowers industries to operate with confidence, efficiency, and unparalleled dependability.

TRAINING

Our Journey

Mr. Gian Prakash
Managing Director

1988

Started the organization in 1988 with KSB Pumps and other Process Industry Products like Sugar, Pharma, Petro Chemical etc.

01

1994

Started our Association with M/s- Atlas Copco (I) Ltd. for Air Compressor business in NCR Region.

02

1996

Started Our association with M/s- Sulzer Pump (I) Ltd. for business of sales and service in North India

03

2010

Started our association with M/s- Demag cranes and Components India Pvt Ltd. PAN India basis.

04

2016

Started our association with M/s-Voltas fork lift Ltd. for selling & providing services in NCR Region.

05

2014

Started our Manufacturing and fabrication company in the name of Times Industrial Engineers Pvt. Ltd.

06

2012

Started our Fabrication shop in Faridabad as a Demag authorised crane builder/ partner in North India.

07

Cranes

EOT CRANES

State-of-the-art material- Flow solutions make it possible to optimise production processes, reduce storage and transport costs, cut delivery times and harmonise workplaces in companies of all sizes – from small workshops to major industrial enterprises. To meet the diverse needs of our customers, we have developed a unique product

range in which everything fits together. Materials handling components and equipment are designed in such a way that they can be used as solo components, as well as modules used to create complex system solutions.

Cranes

UNDERSLUNG CRANES

Underslung Cranes are a type of overhead crane designed to operate in facilities with limited space or specific structural requirements. Unlike traditional overhead cranes that are mounted on top of a runway system, underslung cranes are suspended from the roof structure or ceiling. This configuration makes them ideal for applications where floor space is limited or where the building's design does not allow for standard runway beams.

FEATURES:

Compact Design: The crane is suspended beneath the runway, maximizing the available workspace.

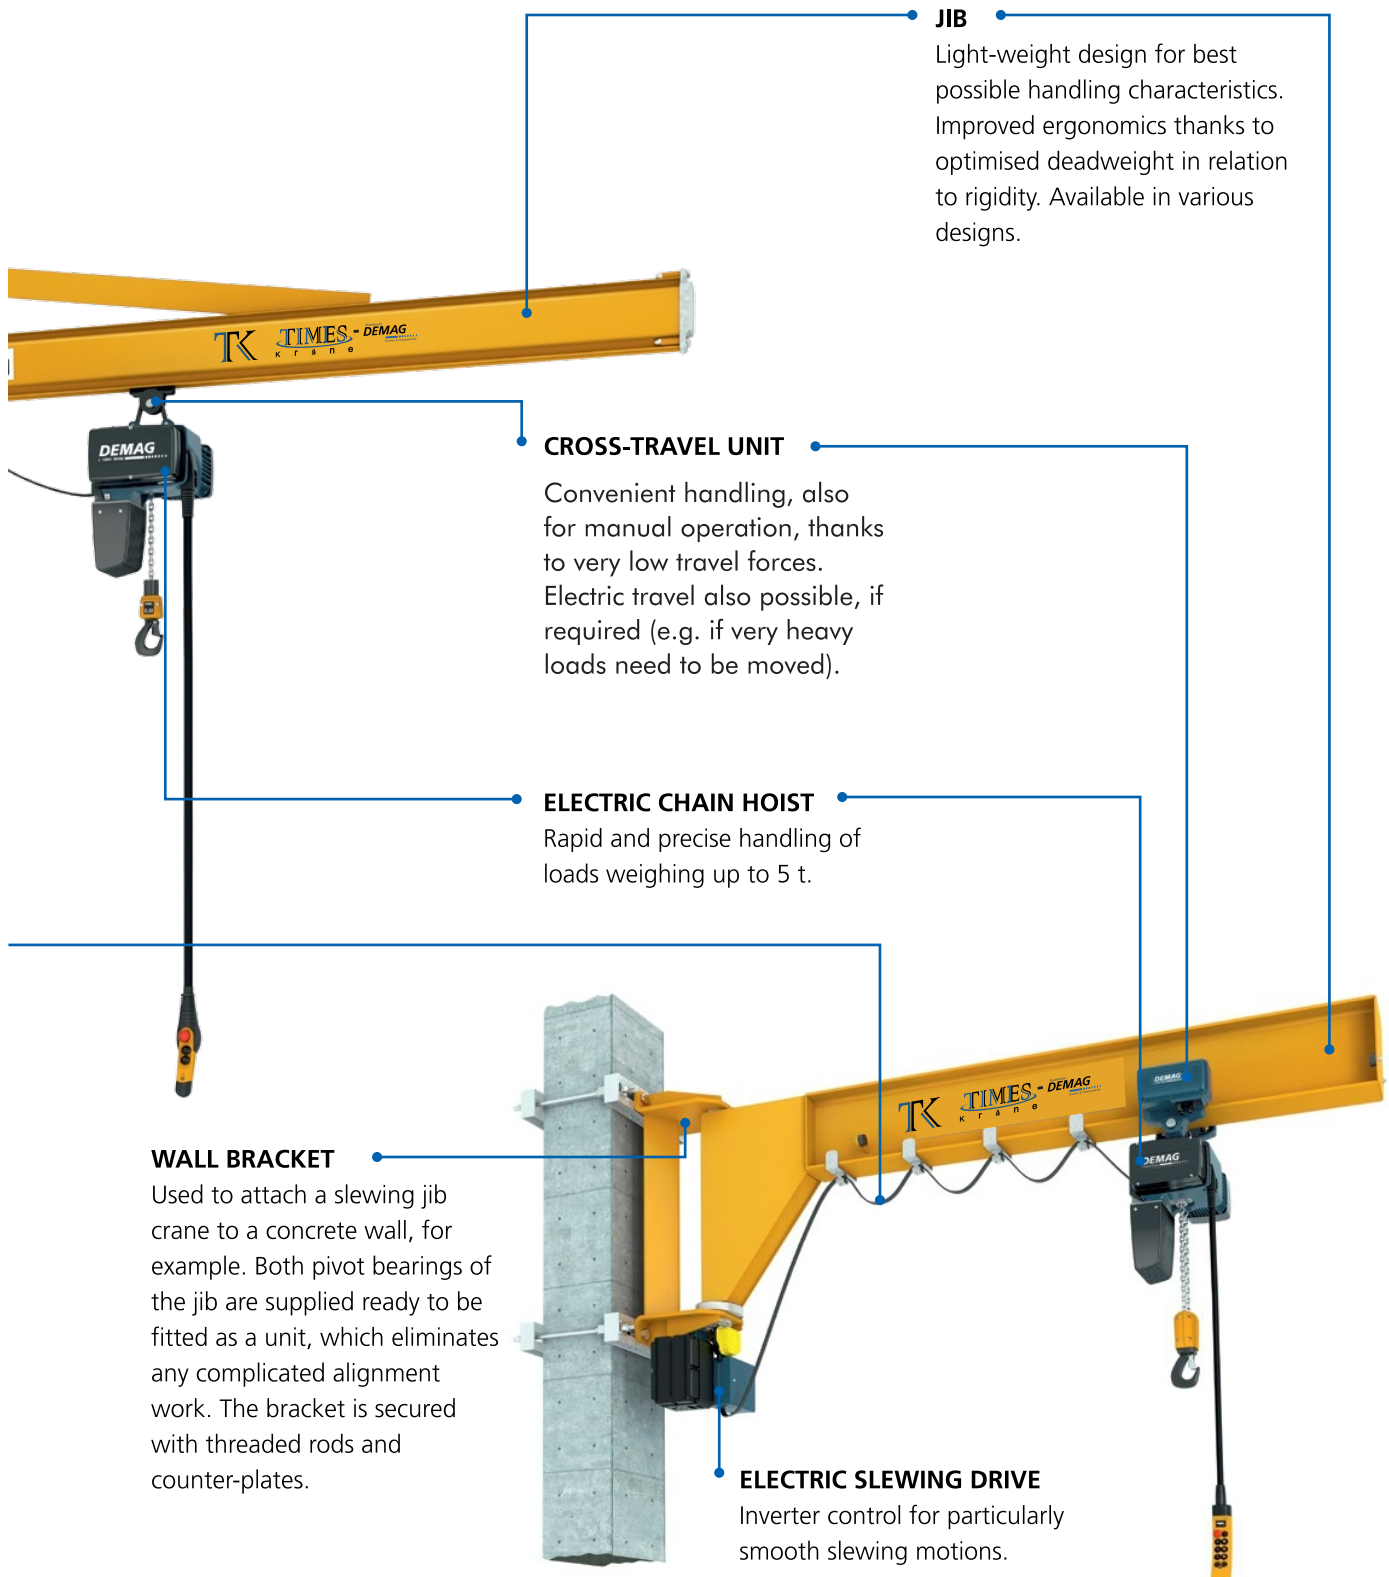

Flexible Installation: Suitable for facilities where roof supports are sufficient to bear the load, eliminating the need for additional supporting columns.

Efficient Material Handling: Ideal for light to moderate lifting tasks, making them versatile for various industries.

Cranes

KBK SYSTEM (X-Y RAIL)

Suspension Monorails- Solutions for Linear Transport

Suspension monorails from the KBK construction kit make it possible to implement tailored solutions for linear, overhead handling. Highly adaptable A wide range of components makes it possible to adapt the route recisely to meet the structural requirements of your workshop. At the same time, all specific product and workplace require-ments of your production facility are met. KBK suspension monorails

PORTAL CRANES

Cost-Effective Outdoor Solution

TK KRANE full-portal cranes can often be integrated into existing production facilities and inhouse logistics processes with only little design effort. They mainly differ from semi-portal cranes by having an integrated articulated leg, which compensates any movements. The load-bearing crane girder is part of the frame structure which, together with the legs at either end, forms a travelling bridge. The cranes run on ground rails, which eliminates the need for a crane runway. Full-portal cranes are preferably used for outdoor operation in storage yards and loading areas.

DEMAG COMPONENTS

The right hoist for every application

DC-Pro/DCS-Pro chain hoist

The DC-Pro chain hoist for loads up to 5,000 kg is a fully featured and can be installed and put into service in a minimum of time. It is extremely user and maintenance-friendly and features an ergonomic design with a high standard of safety and reliability. The particularly long service life (FEM 2m+) provides greater operating efficiency. Thanks to the infinitely variable speed control of the Demag DCS-Pro chain hoist, sensitive parts can be lifted, lowered and positioned more gently and carefully and hoist motions can be performed even more quickly thanks to the high operating speed in the partial load range.

DCM-Pro/DCMS-Pro Manulift

The DCM-Pro Manulift was developed for simple single-handed operation. Thanks to the control unit which is rigidly connected to the load handling attachment, the operator only needs one hand to operate the hoist and guide the load. A quick-change coupling enables the various Manulift load handling attachments to be changed with ease. The DCMS-Pro also provides a Manulift unit with an infinitely variable speed control.

DC-Com chain hoist

The quality basic unit is quick to install and very easy to service. It is the ideal solution for everyday needs in the load range up to 2,000 kg.

DEMAG COMPONENTS

ROPE HOIST

EKDVR

2 - 12.5 Ton
Hookpath 6 to 40m

EUDVR

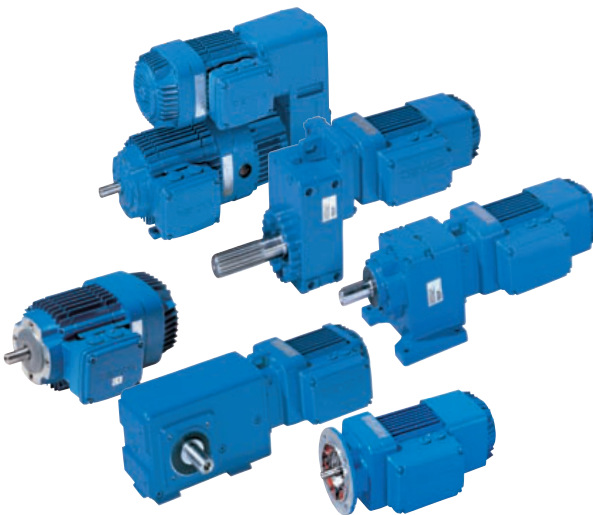

0.5 to 40 Ton
Hookpath 6 to 40m

FDVR

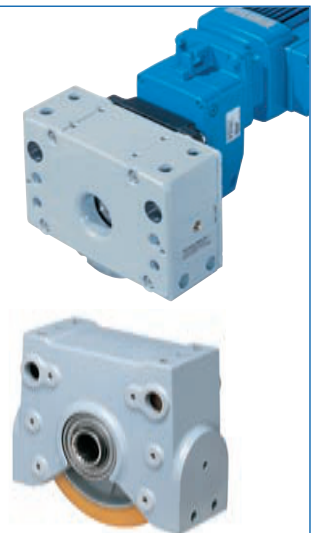

1 - 80 Ton
Hookpath 6 to 40m

Geared motors

Excellent line-fed travel motors for one or two speeds, conical-rotor brake motors for highest demands for starting and stopping applications, as well as cylindrical-rotor motors for standard applications are available for outputs ranging from 0.18 to 45 kW as D-type

helical geared motors for 90 to 5800 Nm, as W-type angular geared motors for 120 to 12,000 Nm and as A-type offset geared motors from 130 to 11,500 Nm.

DRS wheel block system

Innovative series-produced assemblies for travel units with wheel loads up to 40,000 kg

LRS travel wheel system

Robust, universal and easy to select for a wide range of applications in the lower load range up to 6,500 kg.
